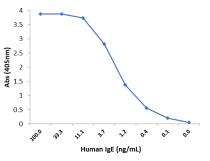

Fig 1. Sandwich ELISA using RM122 as the capture antibody (100ng/well), and Biotinylated anti-human light chains (k+l) antibody RM129 (0.2ug/mL) as the detection antibody, followed by an alkaline phosphatase conjugated streptavidin.

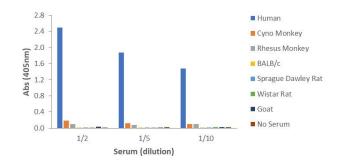

Fig 2. Sandwich ELISA, using RevMAb human IgE matched antibody pair (capture: RM122; detection: Biotin-RM129), shows species reactivity to human only, and shows no cross-reactivity to monkey (Cyno or Rhesus), mouse IgE, rat IgE, or goat IgE.

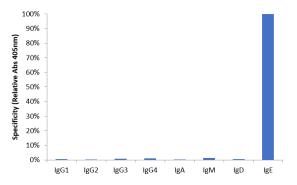

Fig 3. Sandwich ELISA, using RevMAb human IgE matched antibody pair, shows no crossreactivity with Human IgG, IgM, IgA, or IgD. The plate was coated with human IgE capture antibody (50ng/well). Different immunoglobulin samples (0.2 ug/mL) were added and biotinylated RM129 (0.2ug/mL) was used as detection antibody, followed by an alkaline phosphatase conjugated streptavidin
