CANFAST™ Transfection Reagent

Transfection is the process of delivery foreign DNA into the nucleus of cells. Plasmid DNA, siRNA, mRNA, oligonucleotides, or even Proteins such as Antibodies, may be transfected.

Inside Transfection, Canvax™ offers CANFAST™ Transfection Reagent. It is a new generation of **Cationic Polymer** with relevant advantages critical for efficient Transfection, such as DNA condensation and endosomal release, which improves gene Transfection Efficiency, delivering a higher stability, reproducibility and resistance, cost-reduction or easy-to-work with.

CANFAST™ is widely used for both Primary Cell and established Cell Lines with minimal Cytotoxicity and optimal Transfection Efficiency. It is suitable for transfecting Human Cells as **293-HEK, BOSC 23 and HepG2**, Mouse Cells as **NIH3T3, P815, B16F10**, Rat Cells as **RBL2H3, PC12**, and Hamster Cells as **CHO-K1**.

Features & Advantages:

- >> **High transfection efficiency and reproducibility in most common cell lines**, both adherent and suspension cell lines.
- >> **Non-toxic**: minimal cytotoxicity with a cell survival rate higher than 90%.
- >> **Serum-compatible in cell cultures**.
- >> **Easy and time-saving protocol**: just 24 minutes for successful transfections with minimal handling.
- >> **Optimized**: direct application for most cell lines.
- >> **Proven performance**: for transient and stable transfections, adherent and suspension cells.
- >> **Cost effective**: minimal amount of DNA required and allows use of the same medium after transfection.
